

SMSEAGLE NXS-9750-4G

Tech datasheet Rev.4

DEVICE **DESCRIPTION**

SMSEagle is a professional hardware SMS gateway for sending and receiving SMS & MMS messages in an automated manner. The device is designed with focus on reliability and stability. SMSEagle is based on ARM A72 processor with Linux 5.1x OS on--board. It has a modern responsive web-interface, stable database backend, and built-in 4G modems with fail-over mechanisms (based on software watchdog) which monitor the work of the 4G modems. Thanks to built-in 4G modems, SMS messages are sent/received directly to/from UMTS/ LTE network without using any external 3rd party solutions. The device is equipped with external

antennas with 2 dBi gain – important especially in poor signal reception conditions (eg. Server rooms). SMSEagle has a built-in **SQL database** for secure storage of sent and received messages. Built-in SNMP agent allows to constantly monitor a performance of the SMSEagle. The device has a range of built-in plugins (Email2SMS, SMS2Email, Network Monitoring, SMS Forward, Periodic SMS, Callback **URL, Autoreply** and others) that enable additional functionalities. SMSEagle has easy to use API for integration with external applications.

Ready-to-use source codes for API are provided on www.smseagle.eu website.
